CAPABILITY STATEMENT

EncapCyber is a Security as a Service (SecaaS) provider specializing in zero trust security solutions. Leveraging extensive global security leadership and technical expertise, EncapCyber delivers unified and resilient security strategies that align with business objectives. By implementing AI-powered solutions, EncapCyber transforms security into an efficient and measurable business function that fosters both resilience and innovation for a security-first competitive advantage.

AI-ENHANCED CYBERSECURITY SERVICES:

CISO as a Service

Executive-level, global security leadership with deep expertise in the latest industry standards, frameworks and best practices to define and implement a zero trust, security-first strategy.

Regulatory Compliance Management

Navigate complex regulatory standards leveraging multi-layered AI-powered technology to meet regulatory requirements.

Horizontal Zero Trust Integration

End-to-End Zero Trust Cybersecurity Engineering and Architecture to design, build, test and deliver secure products and services.

Endpoint Monitoring, Detection and Response

Continuous, systematic and rapid EDR to minimize business disruption with AI-powered technology.

Vulnerability Assessment & Attack Surface Management

Continuous and systematic vulnerability scanning and attack surface management to identify threats and guide remediation prioritization.

Third Party Security Risk Management

Risk-based due diligence, comprehensive vetting, contractual safeguards, and secure offboarding to ensure the ongoing protection of your data.

Proactive AI Security

Integrate security throughout the entire AI development lifecycle from initial design to final deployment, bolsters model resilience and supports compliance with regulatory standards.

IT Services

On-prem to cloud migration, secure cloud architecture and expert system administration.

Employee Security Awareness Training

Comprehensive training to help employees identify and report Suspicious activities to lower the likelihood of security breaches.
